DETAILED ACTION

1. Please send another copy of the IDS dated 1/7/02 in response to this office action.

Drawings

2. The drawings are objected to under 37 CFR 1.83(a) because they fail to show element number 26 as described in the specification on page 10. Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

5. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over "A Modified Percutaneous Outpatient Bladder Neck Suspension System" by Theodore V. Benderev in view of Foster (90313758.6).

The applicant discloses a surgical instrument for treating femail urinary incontinence having a handle, a shaft able to be adapted to access interior tissue within a human body, a blunt tip and a grasping mechanism located within a distal end portion having a open, intermediate and closed position, and a knob on the handle. Benderev discloses almost the same exact subject matter (see pages 1 and 2, and Fig. 2) except that it only discloses a blunt tip in the closed position and doesn't have a knob on the handle. Foster however discloses a blunt tip and a knob on the handle (see Fig. 1). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the instrument of Benderev such that it had a blunt tip as taught in Foster for the purposes of blunt dissection of tissue.

Allowable Subject Matter

6. Claims 7-9 are allowed.
